

CLIMATE LOGIC[®] SYSTEM

WIRELESS WEATHER SENSING KIT & MAINTENANCE REMOTE

Key Features

- Built-in radio
- Temperature sensor
- Built-in RainSensor™
- Solar sensor
- Receiver Module:
 - Connects to the controller with a single plug-in cord.
 - Converts historical and today's data from the weather sensor to percent of the hottest month's watering time to apply
 - Proportionately alters the controller's water budget
- Weather SD card with local, 40-year average historical weather information, insert the set-up card into the Climate Logic module (included).

Models

Model	Description
CL-100-Wireless	Wireless weather sensor & module kit
CL-W1	Wireless weather sensor
CL-R1	Remote control (transmitter only)
CL-M1	Wireless receiver module
R-100-KIT	Remote control & mini receiver (complete kit)

CL-M1 receiver module

CL-W1 Weather sensor/transmitter

CL-R1

CL-MR

Specifying Information

CL - XXX - WIRELESS

MODEL	CONNECTION
CL - Climate Logic	100 - Receiver & transmitter kit R1 - Remote transmitter only MR - Mini Receiver

Example: a wireless system with sensor & module = **CL-100-Wireless**

*One CL-W1 weather sensor/transmitter can communicate with several CL-M1 receiver modules and their controllers.
