

Sloan is dedicated to, protecting the environment and in doing so, offers the following recommendations for the proper disposal or recycling of used cartridges.

**WASTE CLASSIFICATION**

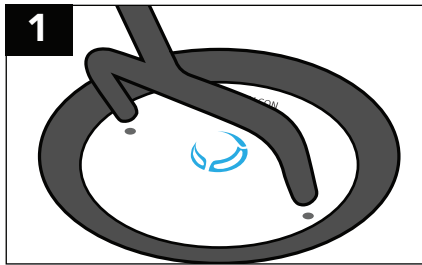

Based upon standards published by the United States Environmental Protection Agency (EPA) and the waste requirements of the Federal Resource and Recovery Act (RCRA 40 CFR §261), the contents of used cartridges are not classified as either hazardous or characteristically hazardous waste. Therefore, used cartridges do not require special handling or disposal procedures beyond what is recommended below in order to be safely disposed in sanitary landfills.

**General waste  
non hazardous**

**DISPOSAL**

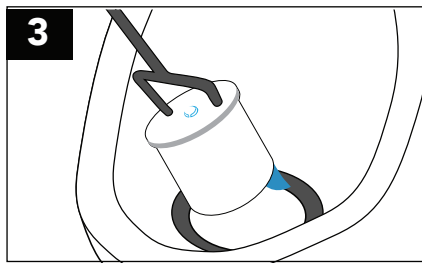

Used cartridges can be disposed in the plastic bags provided with each cartridge. For convenience, it is recommended that during the cartridge change process that fluids are allowed to drain momentarily from the cartridge. Once the cartridge is placed into the disposal bag, securely tighten the bag and then dispose of it with ordinary trash refuse.

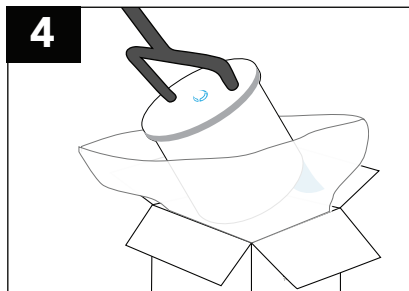

1 Insert key into cartridge.

2 Turn key to left to unlock.

3 Lift and tilt cartridge to drain all free liquids.

4 Place cartridge into bag, tie bag to seal and dispose.

**RECYCLING**

The cartridges are made of pure industrial grade ABS plastic, which is recyclable. Sloan encourages the recycling of our cartridges in conformance with local recycling programs and availability. In the event that an appropriate recycling program is not available in your community, please dispose cartridges as outlined above.

**CUSTOMER SERVICE**

For service support regarding the disposal/recycling of cartridges or any other questions regarding Sloan's Waterfree Urinal system, please contact us directly at: 800.9.VALVE.9 or 847.671.4380 (fax)
